

Food Pass.

Data-Driven agriculture supply
chain management and
traceability

DIGITALIZED CROP SOURCING PROCESSES

Connect the whole agriculture supply chain on one platform. Manage suppliers, contracts, quality, and deliveries from a centralized system.

CROP INSIGHTS & BEST PRACTICES

Provide suppliers with real-time insights into crop health, risk, and climate conditions, enabling data-driven decisions.

Support farmers with your best practices and knowledge.

IOT AUTOMATION

Automated agrotechnical treatment registration, reports, and analytics. Embrace automated weather stations and soil moisture sensors to monitor supplier crops.

FARMER CONTRACTING & ADVISORYS

Manage and track contract fulfillment with detailed data on quantities per crop, supplier, and delivery. Provide agronomic advisory directly through the platform.

SUPPLIER AND CROPS AUDITING

Use telemetry, satellite imaging, and gathered on-platform data to monitor risk, quality standards, and on-field situations. Provide your employees with tools to perform local audits with digital documentation.

STANDARDS & TRACEABILITY

Apply traceability from farm to fork by linking the production, processing, and distribution chain of food products and ingredients. Be compliant with European and global standards.

QUALITY CONTROL

Track all the quality aspects from soil to end product using internal procedures as well as external service providers like laboratories or advisory. Share results with suppliers directly through the platform.

SUPPLIER PORTAL

Open your products to digital marketing. Give your clients and consumers information on food quality and safety standards, impact on the environment, and supplier livelihoods

ADVANCED ANALYTICS

Boost productivity and fight agricultural based challenges using big data, IoT, and artificial intelligence. Use advanced analytics to forecast demand and yields, and perform ad hoc analysis.

LIMITLESS CUSTOMIZATION & BRANDING

FoodPass is highly configurable and built for integrations. Integrate FoodPass with existing ERP, MRP, or accounting systems to increase efficiency and value chain visibility.

Enhance your data and processes with easily pluggable IoT sensors, external services, and custom-developed modules according to your needs.

FoodPass is available as SaaS or a dedicated, private deployment to your servers. Benefit from the cloud-native solution: data security, scalability, performance, and availability.

KEY BENEFITS

- ▶ Transparency & traceability of the value chain
- ▶ Shorten delivery times and chains between farmers, wholesalers, consumers
- ▶ High-quality supplies
- ▶ Data-driven decision-making at all stages
- ▶ Improved productivity, reduced waste
